Slattery Auctions & Valuations
Case Study

About Slattery Auctions & Valuations

Slattery Asset Advisory and Slattery Auctions and Valuations is a proudly independent, family run business. We are the leading provider of premium asset advisory and re marketing services in Australia and Asia Pacific and have a reputation for providing responsive customer service and dynamic commercial solutions.

The Challenge

Having such a varying traffic volume, Slattery Auctions struggled to keep up with the severe spike of users on their site during an auction, to the point where admins had to cap the number of active users so the server wouldn't crash under the thousands of bidders trying to access the site. Put simply; their solution did not scale to the company's needs.

The Solution

Using our AWS Certified Engineers, a solution was devised and implemented to allow affordable dynamic scalability, that would automatically adjust according to the volume of website traffic at the time. We moved Slattery Auctions onto a highly available solution, using Amazon CodeDeploy, Amazon Autoscaling, Amazon ElasticCache and Amazon S3.

The Benefits

Scalability

AWS AutoScaling ensures traffic spikes are dealt with additional servers, provisioned as required.

Cost Reduction

AWS AutoScaling ensures any unused services are decommissioned and do not incur a cost.

Improved Resource Efficiency

Slattery Auctions IT staff can focus on other BAU tasks, thanks to AWS's automated systems.

About Anchor and Amazon Web Services

Anchor is Australia's leading next-gen Engineering Services Provider (ESP), enabling the cloud for SMB territories and emerging enterprises. Anchor achieves this by deeply engaging with customers, while building and operating their technology requirements.

Why AWS: Slattery Auctions & Valuations needed to upgrade from their on premises solution that was unreliable, expensive and unable to scale in high traffic periods. AWS is able to solve all of these pain points with one migration to their infrastructure.
